**ONE HUNDRED TONS  
IS PROPOSED OUTPUT  
OF STEFFNER LEASE**

Leasing Syndicate At Manhattan On Con-  
solidated Ground To Extract Ore  
From 20 Foot Ledge

Special to the Bonanza

MANHATTAN, June 28. — One hundred tons a day is the proposed output of the Steffner lease on the Manhattan Consolidated from now on, according to S. W. Steffner of the leasing syndicate which operates under his name. For the depth and amount of lateral work done this lease has the greatest tonnage potentialities, volume and average richness of its ore body considered, of any mine in the camp. The depth attained is only 200 feet and the ledge averages upwards of 20 feet wide and it will break, according to hundreds of samples personally taken and assayed by Mr. Steffner, from \$20 to \$25 a ton.

He says it will not grade up to the average of the White Caps, but in tonnage it has that property of any other surpassed. It is in a different class than the Big Four, but he thinks it will measure up more tonnage for the depth attained, the total development of the Consolidated being above the 200 and the Big Four glory hole and main workings being below that depth.

The new Steffner shaft is not in the ledge at the bottom, but the station is cut in a great mass of hard lime which carries iron sulphides throughout and assays \$2 a ton. It bespeaks great mineralization permeating that country for an unusual distance round about

with undoubtedly great ore bodies to bring that average above the payable point.

From thence a crosscut connects with the old drift opened six years ago by the Consolidated company. This drift, it appears, was supposed to follow the foot wall, but instead takes across the ledge diagonally until it taps the hanging wall. This may have led to a belief that the ledge was wider than it really is, but the width of 20 feet is great enough to satisfy the most avaricious. This width is maintained on the 100 and 200 levels for more than 1000 feet than the ledge was explored in length by the company in the days previous to Steffner's advent on the property.

In it are many high-grade spots. The ore as a rule is very base, but when it shows any free gold it is there in abundance. Such rich spots were found during the progress of the company work and Tuesday of the present week one of the most remarkable high-grade strikes yet unearthed in the camp was made on the foot wall side of the old drift, not three feet from the opening, and in the space between the drift and the foot that was left when the drift was coursing diagonally across the ledge when it was supposed to be following the wall. The rock that came down with the round of shots was amazing for the quantity and brilliancy of the gold that it showed. But the visible gold

**ARTIST AND THE  
BRAIN SPECIALIST  
IS FEATURE FILM**

LATEST EDISON RELEASE WILL  
BE SHOWN TONIGHT AT THE  
BUTLER THEATER

Tonight will be shown that big Edison release, entitled, "The Artist and the Brain Specialist," featuring London's greatest cartoonist, "Jack and Jingles," Selig drama. The heart interest of the newboy and his dog, "Tis Mother," a Pathe story, very touching. A young girl elopes with her sweetheart and becomes very wealthy, while her parents become poverty-stricken. Her mother is in search of work and goes to her daughter's place for work. She is engaged by the butler as a cook and is later discharged, and it is then she comes face to face with her daughter. One of the most touching scenes ever witnessed in a picture. "The Redemption of Ben Farland." This is a good ranch story produced by the Vitagraph company.

Tuesday will be seen the latest in motion pictures and the first shown in Goldfield. "The Katzenjammer Kids." This promises to be the greatest comedy picture ever shown on a screen.

Don't forget the benefit given by the Yeomen. It is for a good cause and should fill the house. Several vaudeville stunts will be given also. Miss Hatch will sing new songs and good music. Be sure and bring your friends and neighbors. Only two shows.

**TEMPERATURE REPORT**

Highest temperature yesterday 81; a year ago 84. Lowest last night 59; a year ago 52.

was the least part of it, the main values being in the sulphides.

The fact that the Steffner ore unusually heavy in its sulphide constituents has led to a report that it is too base for treating by cyanide. This report has been circulated in Manhattan during the two weeks too industriously to be a mere idle rumor. The ore is base and more so than any other in the camp, but the problem of treating it here is the simplest in the world. The plan adopted at the Associated mill is merely to run it in connection with the much more easily cyanided ore of the White Caps. This is done by sampling and stamping them separately, basing the values on the samplings and completing the extraction by the simplest division imaginable.

Milling is Mr. Steffner's business. He followed it exclusively for 14 years and has devoted his life to it as a study.

One of the finest plants in the camp is that of this lease. Especially is this true of the compressor, which fills and automatically stops like clockwork. Both the compressor and the hoist are operated by electricity and to the exceptional capacity of the former is due the fact that the lease will hereafter be capable of placing 100 tons of ore daily in the near-by mill.
